

## HELIFOR

Helifor Industries Limited, a leader in industrial Helicopter applications, has been in operations since 1978. During its inception, Helifor pioneered helicopter logging in British Columbia by using a Vertol 107 to harvest inaccessible cedar stands along coastal inlets of BC.

“We purchased two GPS VIASAT 5000X units in May 2005 after conducting field trials with other units.

The 5000X clearly performed better than the others. We require units that are light and compact, but they must also work in steep mountainous terrain under heavy forest canopy. The 5000X is the best unit on the market for our needs”.
